

| Name                                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                          | Can this be | Page 1 |
|------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|--------|
| 1.1.1 Non-text Content                                     | All images and other non-text content (like icons, charts, audio, CAPTCHAs, or controls) must have a descriptive text alternative that conveys their meaning. Purely decorative content can be hidden from assistive technologies (e.g. using <code>aria-hidden="true"</code> ).                                                                                                                                                     | Yes         | YES    |
| 1.2.1 Audio-only and Video-only (Prerecorded)              | Prerecorded audio-only content must have a text transcript. Prerecorded video-only content must have a text or audio description.                                                                                                                                                                                                                                                                                                    | No          | N/A    |
| 1.2.2 Captions (Prerecorded)                               | Prerecorded videos with audio must have synchronized captions that include: all speech; relevant sound effects (like music, alarms, or laughter).                                                                                                                                                                                                                                                                                    | No          | N/A    |
| 1.2.3 Audio Description or Media Alternative (Prerecorded) | Important visual content in prerecorded videos must be described using: an audio description or; a text-based alternative.                                                                                                                                                                                                                                                                                                           | No          | N/A    |
| 1.2.4 Captions (Live)                                      | Live video with audio must include real-time captions that cover: speech and; important sound effects (like music, alarms, or laughter).                                                                                                                                                                                                                                                                                             | No          | N/A    |
| 1.2.5 Audio Description (Prerecorded)                      | Important visual content in prerecorded videos with audio must be described using: an audio description, unless it is already explained in the main audio track.                                                                                                                                                                                                                                                                     | No          | N/A    |
| 1.3.1 Info and Relationships                               | Visual information and relationships (like labels, headings, or groupings) must also be conveyed in the code using semantic HTML (e.g. <code>&lt;label for=""&gt;</code> , <code>&lt;ul&gt;</code> , <code>&lt;h1&gt;</code> ) or ARIA attributes (e.g. <code>&lt;aria-describedby=""&gt;</code> , <code>&lt;role="group"&gt;</code> ) so that assistive technologies can understand the structure and relationships of the content. | Yes         | YES    |
| 1.3.2 Meaningful Sequence                                  | Content must follow a logical and meaningful order in the code so it can be understood correctly by assistive technologies even if the visual layout differs.                                                                                                                                                                                                                                                                        | No          | YES    |
| 1.3.3 Sensory Characteristics                              | Instructions and descriptions must not rely on sensory features alone, like color, shape, size, visual location, or sound. Always provide additional text to clarify meaning.                                                                                                                                                                                                                                                        | No          | YES    |
| 1.3.4 Orientation                                          | Content must remain readable and usable in both portrait and landscape orientation, unless a specific one is essential (e.g. in a piano app that requires landscape to show the full keyboard).                                                                                                                                                                                                                                      | No          | YES    |
| 1.3.5 Identify Input Purpose                               | The purpose of common form fields (like name, email, or address) must be defined in the code so that browsers and assistive technologies can offer input support, such as autocomplete.                                                                                                                                                                                                                                              | Yes         | N/A    |
| 1.4.1 Use of Color                                         | Color must not be the only way to convey information. Always provide an additional visual cue, like icon, text label, underline, shape, or pattern (e.g. striped, solid).                                                                                                                                                                                                                                                            | Yes         | YES    |
| 1.4.2 Audio Control                                        | If audio plays automatically for more than 3 seconds, it must be possible to pause the audio, stop the audio, or adjust the volume, without using system-wide controls.                                                                                                                                                                                                                                                              | No          | N/A    |
| 1.4.3 Contrast (Minimum)                                   | Text contrast against its background must be at least 4.5:1 for normal text, or 3:1 for large text (over 24px, or bold and over 19px).                                                                                                                                                                                                                                                                                               | Yes         | YES    |
| 1.4.4 Resize Text                                          | Text remains readable and usable when zoomed to 200%.                                                                                                                                                                                                                                                                                                                                                                                | No          | YES    |
| 1.4.5 Images of Text                                       | Text must be actual text, not images of text, unless a specific visual presentation is absolutely necessary (e.g. logo).                                                                                                                                                                                                                                                                                                             | No          | YES    |
| 1.4.10 Reflow                                              | Content remains functional and easy to read when: zoomed to 400% or; viewed at 320px width, without needing to scroll in two directions (except for tables, maps, and similar content).                                                                                                                                                                                                                                              | No          | YES    |
| 1.4.11 Non-text Contrast                                   | Interactive controls (e.g. buttons, form fields, focus indicators) and graphics that convey meaning (e.g. icons, charts, graph lines) must have a contrast ratio of at least 3:1 against adjacent colors.                                                                                                                                                                                                                            | Yes         | YES    |
| 1.4.12 Text Spacing                                        | Text remains readable and usable when spacing is changed using custom styles to at least 1.5× line height, 2× spacing after paragraphs, 0.12× letter spacing, 0.16× word spacing, without content being hidden, cut off, or broken.                                                                                                                                                                                                  | No          | YES    |
| 1.4.13 Content on Hover or Focus                           | When additional content appears on hover or keyboard focus (including long press on touch), it must stay visible until dismissed or no longer valid, be dismissible (e.g. using the key), and remain visible when hovered or focused.                                                                                                                                                                                                | No          | N/A    |
| 2.1.1 Keyboard                                             | All functionality must be operable using a keyboard alone, unless the task requires freehand input (e.g. drawing).                                                                                                                                                                                                                                                                                                                   | No          | NO     |
| 2.1.2 No Keyboard Trap                                     | It must always be possible to move focus into and out of any component using a keyboard alone (e.g. [tab], [shift] + [tab], [enter], [esc]), without getting stuck.                                                                                                                                                                                                                                                                  | No          | YES    |
| 2.1.4 Character Key Shortcuts                              | Keyboard shortcuts should use modifier keys like [ctrl], [cmd], or [alt/option]. If single-key shortcuts are used (e.g. 'S' for save), it must be possible to turn them off, remap them with a modifier key, or restrict them to when the relevant element is focused.                                                                                                                                                               | No          | YES    |
| 2.2.1 Timing Adjustable                                    | Time limits must be avoided unless essential for the task (e.g. exams, auctions). If time limits are used, it must be possible to turn them off, adjust them to at least 10× the default, or extend them by at least 10×.                                                                                                                                                                                                            | No          | N/A    |
| 2.2.2 Pause, Stop, Hide                                    | If content moves, scrolls, blinks, or updates automatically for more than 5 seconds, it must be possible to pause it, stop it, or hide it.                                                                                                                                                                                                                                                                                           | No          | N/A    |
| 2.3.1 Three Flashes or Below Threshold                     | Content must not flash, blink, or flicker more than three times per second, unless it stays within safety limits designed to avoid visual overload and reduce the risk of seizures.                                                                                                                                                                                                                                                  | No          | N/A    |
| 2.4.1 Bypass Blocks                                        | It must be possible to skip repeated blocks of content (e.g. navigation, header) and jump directly to the main part of the page.                                                                                                                                                                                                                                                                                                     | No          | YES    |
| 2.4.2 Page Titled                                          | Each page must have a unique and descriptive title that reflects its topic or purpose.                                                                                                                                                                                                                                                                                                                                               | Yes         | YES    |
| 2.4.3 Focus Order                                          | Focus must follow a logical and meaningful order that preserves relationships and matches how the page is naturally read, regardless of layout or language direction.                                                                                                                                                                                                                                                                | No          | YES    |
| 2.4.4 Link Purpose (In Context)                            | The purpose of each link must be clear from the link text itself, or the surrounding context.                                                                                                                                                                                                                                                                                                                                        | No          | YES    |
| 2.4.5 Multiple Ways                                        | At least two different ways must be available to find pages or content (e.g. navigation menus, on-page links, site search, or a sitemap).                                                                                                                                                                                                                                                                                            | No          | YES    |
| 2.4.6 Headings and Labels                                  | Headings must describe what follows. Labels and buttons must clearly communicate what information is needed or what action will happen.                                                                                                                                                                                                                                                                                              | No          | YES    |
| 2.4.7 Focus Visible                                        | A visible indicator must show which element is currently focused when navigating with a keyboard.                                                                                                                                                                                                                                                                                                                                    | Yes         | YES    |
| 2.4.11 Focus Not Obscured (Minimum)                        | When an element receives focus, it must be at least partially visible.                                                                                                                                                                                                                                                                                                                                                               | Yes         | YES    |
| 2.5.1 Pointer Gestures                                     | Actions that rely on gestures (like swiping or pinching) must also be possible using a single tap, click, or button.                                                                                                                                                                                                                                                                                                                 | No          | YES    |
| 2.5.2 Pointer Cancellation                                 | Actions must not trigger on press or touch down. They must only trigger on release (like mouse-up or finger lift).                                                                                                                                                                                                                                                                                                                   | No          | YES    |
| 2.5.3 Label in Name                                        | The visible text of a button, link, or form field must also be part of its accessible (programmatic) name.                                                                                                                                                                                                                                                                                                                           | Yes         | YES    |
| 2.5.4 Motion Actuation                                     | If an action can be triggered by motion (like shaking or tilting the device), it must also work without motion, and be possible to turn off motion-based input.                                                                                                                                                                                                                                                                      | No          | N/A    |
| 2.5.7 Dragging Movements                                   | Actions that require dragging (like reordering) must also be possible using buttons or another method that does not require dragging.                                                                                                                                                                                                                                                                                                | No          | YES    |
| 2.5.8 Target Size (Minimum)                                | Targets must be at least 24×24px, unless they are part of a sentence or block of text, surrounded by enough space, or near another target with the same function that meets the size.                                                                                                                                                                                                                                                | Yes         | YES    |
| 3.1.1 Language of Page                                     | Each page must have a <code>&lt;html lang=""&gt;</code> attribute that matches the main language of the page.                                                                                                                                                                                                                                                                                                                        | Yes         | YES    |
| 3.1.2 Language of Parts                                    | Any parts of the content in a different language must be marked with the correct lang attribute. Expressions borrowed from another language (like "déjà vu" in English) do not need this, unless pronunciation or understanding would be affected.                                                                                                                                                                                   | Yes         | YES    |
| 3.2.1 On Focus                                             | No unexpected changes must happen when an element receives focus (like open a popup, move focus, submit a form).                                                                                                                                                                                                                                                                                                                     | No          | YES    |
| 3.2.2 On Input                                             | No unexpected changes must happen when a field value changes (like auto-submit, reload, open new page).                                                                                                                                                                                                                                                                                                                              | No          | YES    |
| 3.2.3 Consistent Navigation                                | Navigation elements (like menus, links, search) must appear in the same place and order across pages.                                                                                                                                                                                                                                                                                                                                | No          | YES    |
| 3.2.4 Consistent Identification                            | Elements with the same function must look, behave, and be labeled the same way across pages.                                                                                                                                                                                                                                                                                                                                         | No          | YES    |
| 3.2.6 Consistent Help                                      | Help options (like contact link, support widget) must appear in the same place across pages.                                                                                                                                                                                                                                                                                                                                         | No          | YES    |
| 3.3.1 Error Identification                                 | Errors and validation must be clearly identified and described in text, not just visually (like color or highlighting).                                                                                                                                                                                                                                                                                                              | No          | YES    |
| 3.3.2 Labels or Instructions                               | Form fields must have clear labels or instructions to avoid confusion and help complete the input correctly.                                                                                                                                                                                                                                                                                                                         | No          | N/A    |
| 3.3.3 Error Suggestion                                     | Errors and validation messages must show text that explains the problem and gives suggestions for how to fix it (like "enter at least 8 characters").                                                                                                                                                                                                                                                                                | No          | YES    |
| 3.3.4 Error Prevention (Legal, Financial, Data)            | Before submitting important actions (like payments or legal forms), the form must allow reviewing the input, correcting mistakes, or confirming.                                                                                                                                                                                                                                                                                     | Yes         | N/A    |
| 3.3.7 Redundant Entry                                      | Don't ask for the same information twice in the same process. Provide pre-filled fields or selection options if the information was already given.                                                                                                                                                                                                                                                                                   | No          | N/A    |
| 3.3.8 Accessible Authentication (Minimum)                  | Authentication must not rely on memory alone. Allow copy-paste, password managers, or other options (like email verification).                                                                                                                                                                                                                                                                                                       | No          | N/A    |
| 4.1.2 Name, Role, Value                                    | Interactive elements must have a clear name (what it is), the correct role (what it does), and any current value or state, so that assistive technologies can interpret and interact with them correctly.                                                                                                                                                                                                                            | Yes         | YES    |
| 4.1.3 Status Messages                                      | Status updates (like "form sent" or "5 items in cart") must be coded using proper roles (like <code>role="status"</code> or <code>role="alert"</code> ), be detectable by assistive technologies, and not require moving focus.                                                                                                                                                                                                      | No          | N/A    |
